

MUBASHIR KHAN MOHAMMED

Senior Java & Full Stack Developer

(978) 712-8190 | MubashirKhan.Mohammed@cognizant.com | linkedin.com/in/mubashir-khan-mohammed

PROFESSIONAL SUMMARY

Results-driven Senior Java & Full Stack Developer with 8+ years of experience designing and delivering enterprise-grade microservices, REST APIs, and cloud-native applications. Proven track record in CI/CD pipeline engineering, Kafka-based event-driven architectures, production incident management (L2/L3), and DevOps tooling with OpenShift and Jenkins. Adept at translating complex business requirements into scalable Spring Boot solutions, with hands-on expertise in AWS, Docker, and Agile/Scrum delivery. Consistently reduces deployment time, improves system uptime, and delivers measurable operational efficiency.

TECHNICAL SKILLS

Languages	Java 8/11/17, Python, JavaScript, TypeScript, SQL, PL/SQL, Groovy, Shell/Bash, PowerShell
Frameworks	Spring Boot, Spring MVC, Spring Security, Spring AOP, Spring Data, Hibernate, Apache Camel, Struts, ReactJS, Angular (4/5), Node.js
Cloud & DevOps	AWS (EC2, S3, ELB, VPC, IAM, CloudWatch, Auto Scaling, Elastic Beanstalk), OpenShift, Docker, Jenkins CI/CD, GitLab CI/CD, Kafka
Databases	MySQL, Oracle, DB2, MS SQL Server, MongoDB, Cassandra, CouchDB
Monitoring	Dynatrace, CloudWatch, ServiceNow, BMC Remedy, Jira Service Desk
Web Services	RESTful APIs, SOAP, JAX-RS, JAX-WS, WSDL, JSON, XML, JAXB, JAXP
Web Technologies	HTML5, CSS3, Bootstrap, jQuery, AJAX, AngularJS, ReactJS
Servers	Apache Tomcat, IBM WebSphere, WebLogic, JBoss, GlassFish
Tools & Practices	Git, GitHub, GitLab, SVN, JIRA, Postman, Maven, Agile/Scrum, TDD, ITIL Incident Management

PROFESSIONAL EXPERIENCE

Senior Java Developer (Contract) | Fresenius Medical Care

Waltham, MA · Aug 2025 – Present

- Designed and maintained OpenShift deployment templates for microservices, enabling consistent rollouts across Dev, QA, and Production environments — eliminating environment-specific configuration drift.
- Built and optimized Jenkins CI/CD pipelines for Fera, ECC, and EPOC projects, automating build, test, and deployment cycles and significantly increasing release velocity.
- Implemented Kafka producers and consumers for high-throughput, low-latency inter-service messaging; optimized partitions, topics, and consumer group configurations for peak scalability.
- Monitored production health of PatientTrak and Coders Tool using Dynatrace dashboards and alerts, proactively resolving bottlenecks before customer impact.
- Led Rapid Response Team (RRT) bridge calls during P1/P2 incidents; conducted root cause analysis (RCA) and implemented corrective actions, reducing MTTR by driving structured escalation and resolution workflows.
- Automated administrative tasks by integrating PowerShell scripts into Jenkins pipelines, reducing manual operational overhead by ~30%.
- Executed production changes following full change management lifecycle: impact analysis, risk assessment, stakeholder approvals, and rollback planning — achieving zero unplanned downtime.

Stack: Java, Spring Boot, Kafka, OpenShift, Jenkins, Dynatrace, GitLab, PowerShell, Bash, ServiceNow, Postman, Confluence, Jira

Java Developer (Contract) | Centene Corporation

St. Louis, MO · Aug 2024 – Jul 2025

- Automated infrastructure provisioning and deployment via PowerShell scripts, reducing manual deployment time by 40% and cutting human error in release pipelines.
- Managed and resolved high-priority incidents using ServiceNow following ITIL Incident Management processes, improving SLA compliance for Centene Provider Support applications.
- Configured Dynatrace monitoring for real-time visibility into application performance across cloud and on-prem environments; delivered regular performance reports to engineering and operations stakeholders.
- Managed GitLab repositories including branching strategies, merge request reviews, and release tagging to maintain code integrity across multiple parallel feature streams.
- Developed ServiceNow dashboards tracking incident trends, KPIs, and SLA metrics, enabling data-driven decisions for operations leadership.
- Performed job failure analysis, identified root causes, and implemented corrective and preventive actions to minimize recurring incidents.

Stack: Java, Spring Boot, Kafka, AWS, ServiceNow, Dynatrace, GitLab, Pega, ControlM, PowerBI, Postman, Tomcat, Jira

Full Stack Java Developer | Liberty Mutual Insurance

Exeter, NH · Sep 2019 – Jul 2024

- Architected and developed microservices using Spring Boot, Spring Security, and OAuth2, implementing authentication and authorization for enterprise insurance applications serving thousands of users.
- Built RESTful APIs with Spring REST Controller, ensuring secure, JSON-based communication across distributed services.
- Engineered Kafka producers and consumers in Java for seamless high-volume data ingestion and real-time event streaming across microservices.
- Implemented Spring AOP, Dependency Injection, and DAO patterns to decouple business logic and improve application maintainability and testability.
- Developed interactive frontend features using ReactJS and jQuery with AJAX, improving UI responsiveness and user engagement.
- Championed Test-Driven Development (TDD); authored comprehensive JUnit and integration tests for every feature, resulting in a significant reduction in post-deployment defects.
- Participated in Agile/Scrum ceremonies; used JIRA for sprint tracking, bug management, and backlog grooming across cross-functional teams.

Stack: Java, Spring Boot, Spring Security, OAuth2, Kafka, AWS, Docker, Tomcat, ReactJS, jQuery, REST, SOAP, JNDI, JDBC, Git

Full Stack Developer | University of Phoenix

Phoenix, AZ · Feb 2018 – Sep 2019

- Developed single-page applications (SPAs) using Angular 4/5.2 and TypeScript, improving frontend performance and reducing page load times.
- Implemented backend logic using Java 8 (Streams, Lambda Expressions, Collections Framework, Multithreading) and Groovy/Grails, integrated with Oracle DB via PL/SQL.
- Designed responsive UI components using HTML5, CSS3, Bootstrap, and AngularJS, achieving mobile-first, accessible interfaces.
- Integrated REST APIs with Angular frontend, leveraging Spring Security for session management and Node.js for API mocking during frontend-independent development.

Stack: Java 8, Spring, Spring Security, Groovy/Grails, Angular 4/5, TypeScript, Node.js, HTML5, CSS3, Bootstrap, Oracle, Hibernate, Maven, REST

Java Developer | Flipkart Internet Pvt. Ltd.

India · May 2015 – Oct 2015

- Developed desktop and web components using Java Swing/JFC and JSF for an internal logistics tracking system managing LTL (Low Truck Load) operations.
- Implemented SOA architecture using SOAP, WSDL, UDDI, and JAX-WS for external web service integration.
- Applied J2EE design patterns (Service Locator, Session Facade, Singleton) and Spring AOP for cross-cutting concerns including logging and monitoring.

Stack: Java, J2EE, Spring, Hibernate, Struts, JSF, JSP, SOAP, JAX-WS, XML, DB2, Oracle, WebLogic, Maven, Eclipse

PROFESSIONAL HIGHLIGHTS

- ITIL v4 Foundation – Incident & Change Management aligned delivery
- 8+ years enterprise Java development | 5+ years cloud-native microservices (Spring Boot + AWS)
- Production support: 24/7 L2/L3 incident ownership, P1/P2 RRT bridge lead, MTTR reduction
- Delivered 40% reduction in deployment time through PowerShell automation.
